

Have you heard ? about the firm:

The acoustical environment cannot be seen, but its presence is influential. New building materials, changing technology and mechanical systems, open office spaces, and awareness of acoustics in the workplace and learning environment have now made the consideration of acoustic control an important component in the traditional design process.

JEACOUSTICS (JEA) is an acoustical consulting firm (TBPE Firm Reg. No. F-6534) specializing in architectural acoustics, mechanical, and environmental noise and vibration. Jack B. Evans, P.E., founded the firm in 1986 in Austin, Texas, as a corporation to focus on architectural and mechanical noise and vibration control, acoustics, and environmental noise. JEA is a Small Business Concern (size standard less than \$4.5 M annual average gross) with a Standard Industry Classification 8711, Consulting Engineering. JEA belongs to the National Council of Acoustical Consultants. JEA has consulted on more than 30 sustainable design and LEED® projects and completed over 1600 acoustical, environmental, and mechanical noise and vibration control projects in 33 states of the U.S. and 36 countries in the Americas, Europe, Asia, and Africa.

Architectural acoustics includes reverberation, echo, focus, and sound isolation. Vibration and mechanical noise control focuses on building HVAC and process equipment. Industrial acoustics is the control of sound exposure in the work place. Environmental noise is the prediction, measurement, and mitigation of outdoor noise, including transportation, amplified music, and mechanical equipment.

JEACOUSTICS provides solutions for acoustical needs that complement rather than compromise the architects' and engineers' design concepts. JEA's solutions for noise, vibration, and acoustics enhance each facility's unique environmental characteristics. The owner and designers can rely on competent and pragmatic consultation to formulate integrated solutions to the complex problems of modern design.

Our secret of success is a staff commitment to personalized, one-on-one service between client and primary consultant. The firm works closely with facility managers, engineers, and architects to integrate acoustics and noise control recommendations into facility designs and to conduct field noise measurements and analyses for fundamental, cost effective, and practical solutions. We can provide services in the client's office, on-site, or from our offices in Austin, using up-to-date, portable analysis, computer, and communications equipment. JEA also promotes professional development and continuing education by regularly presenting and participating in international conferences and seminars.
